DNS

The HRZ operates a cluster for the DNS/DHCP service in Wilhelmshaven. The data is dynamically distributed to the client and does not have to be specified manually.

In case of a manual configuration, please use this **DNS Server**:

- **139.13.250.66**

Microsoft Windows

These settings are made automatically. For a manual configuration, you can configure this in Network Connections → Network Connection Properties → Internet Protocol, Version 4.
